

CLIMATE CHANGES

INTRODUCTION

2019 was the second warmest year on record and the end of the warmest decade (2010- 2019) ever recorded. Carbon dioxide (CO₂) levels and other greenhouse gases in the atmosphere rose to new records in 2019. Climate change is affecting every country on every continent. It is disrupting national economies and affecting lives. Although greenhouse gas emissions are projected to drop about 6 per cent in 2020 due to travel bans and economic slowdowns resulting from the COVID-19 pandemic, this improvement is only temporary. Climate change is not on pause. Once the global economy begins to recover from the pandemic, emissions are expected to return to higher levels.

RESULT

The following graphs are the results of the project.

CONCLUSION

Climate change came to international public attention in the late 1980s.^[314] Due to confusing media coverage in the early 1990s, understanding was often confounded by conflation with other environmental issues like ozone depletion.^[315] In popular culture, the first movie to reach a mass public on the topic was *The Day After Tomorrow* in 2004, followed a few years later by the Al Gore documentary *An Inconvenient Truth*. Books, stories and films about climate change fall under the genre of [climate fiction](#).¹
